Introduction

Changing glance color?

Usually, Glance display color is *white by default in Normal Mode* but in *night mode, you get to choose between 3 colors; Red, Green & Blue.*

But, with this guide, you will be able to **change the color of both NORMAL & NIGHT MODE of the Glance to Blue, Cyan, Green, Magenta, Yellow, Red.**

What is Normal Mode & Night Mode?

As by the name, Normal mode is the default Glance mode.

Night Mode is an additional mode which you can set to activate during a period of time in Glance Settings.

Any pre-requirements?

This guide involves registry editing.

So, you **need to Jailbreak your device** before you can follow this guide.

Preparations

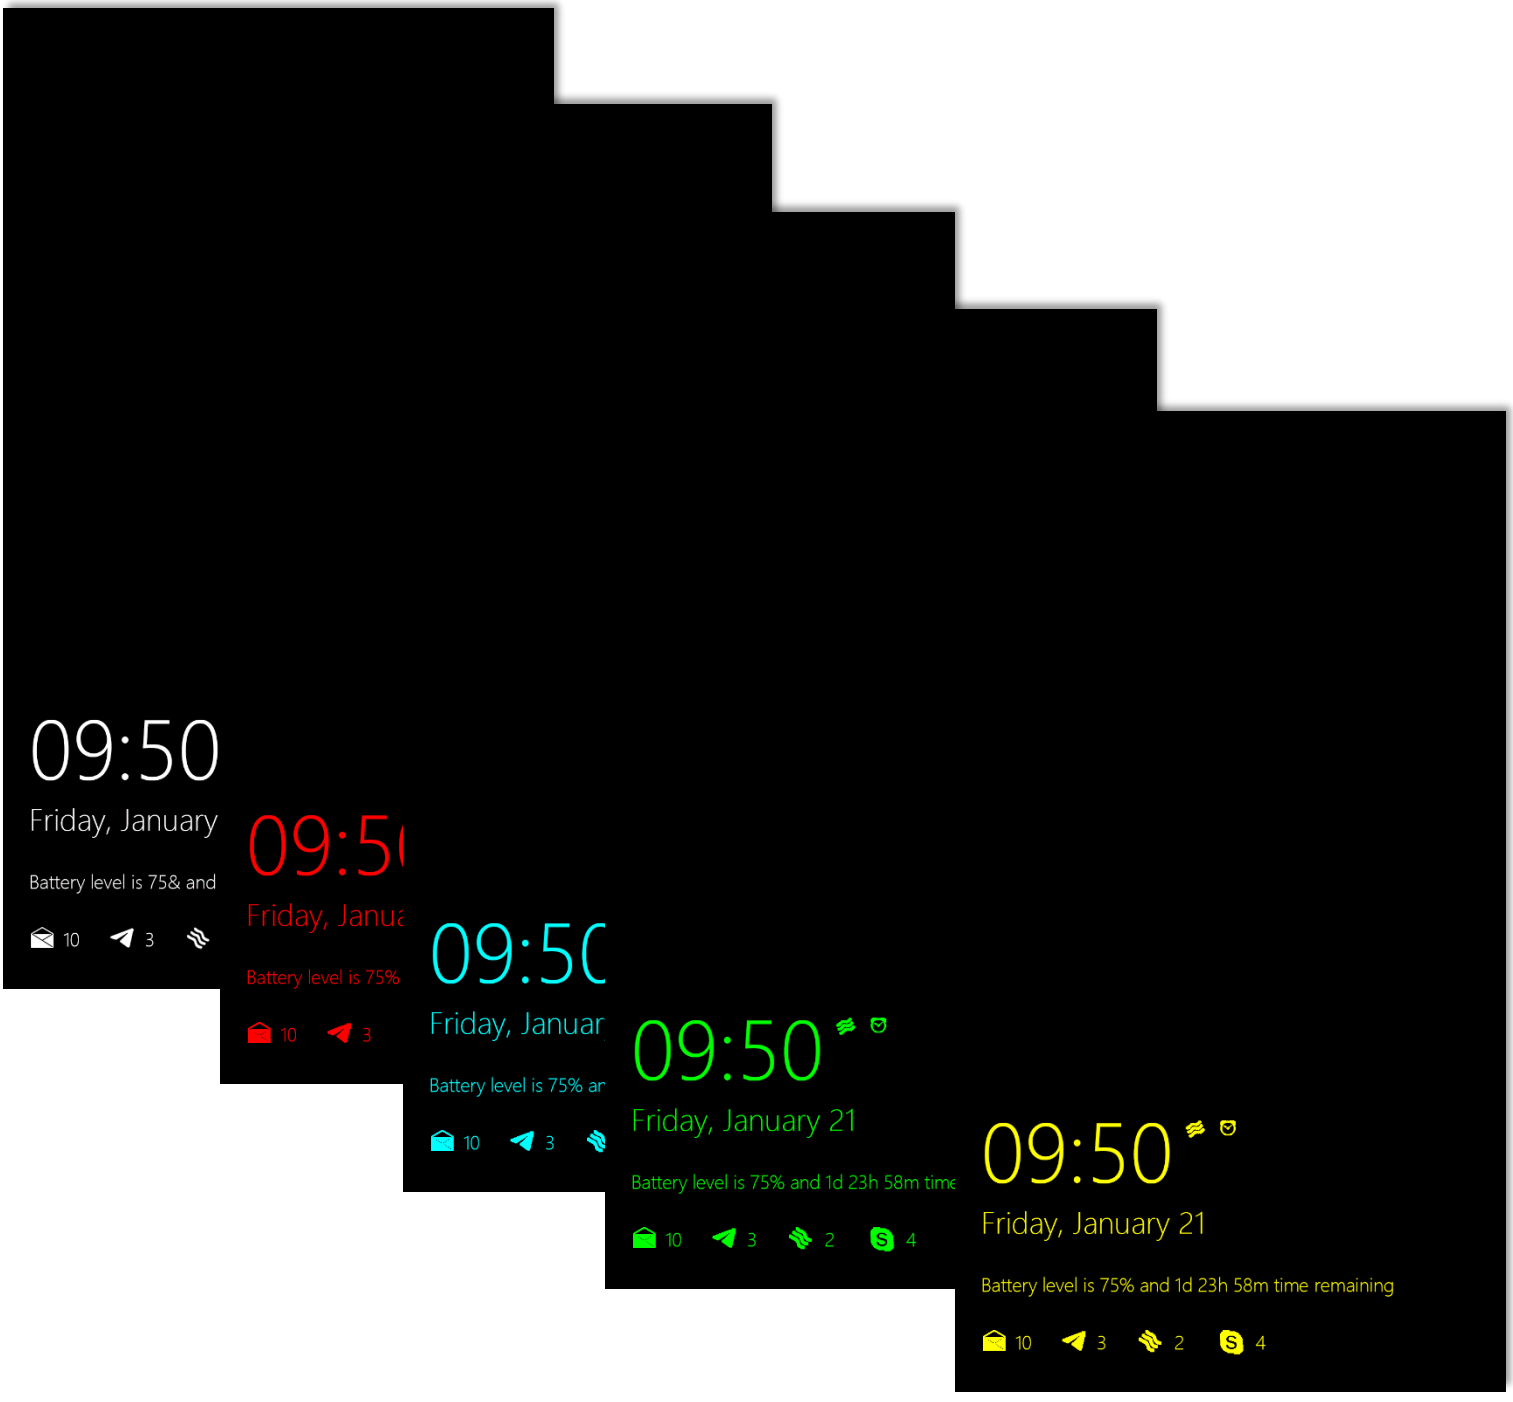
Download CustomPFD

W.U.T MEGA

How to Change Glance Color

Since, we will show you how to change both Normal Mode Glance Color & Night Mode Glance color, we will separate this guide to main two topics based on those two.

- How to Change Normal Mode Glance Color
- How to Change Night Mode Glance Color



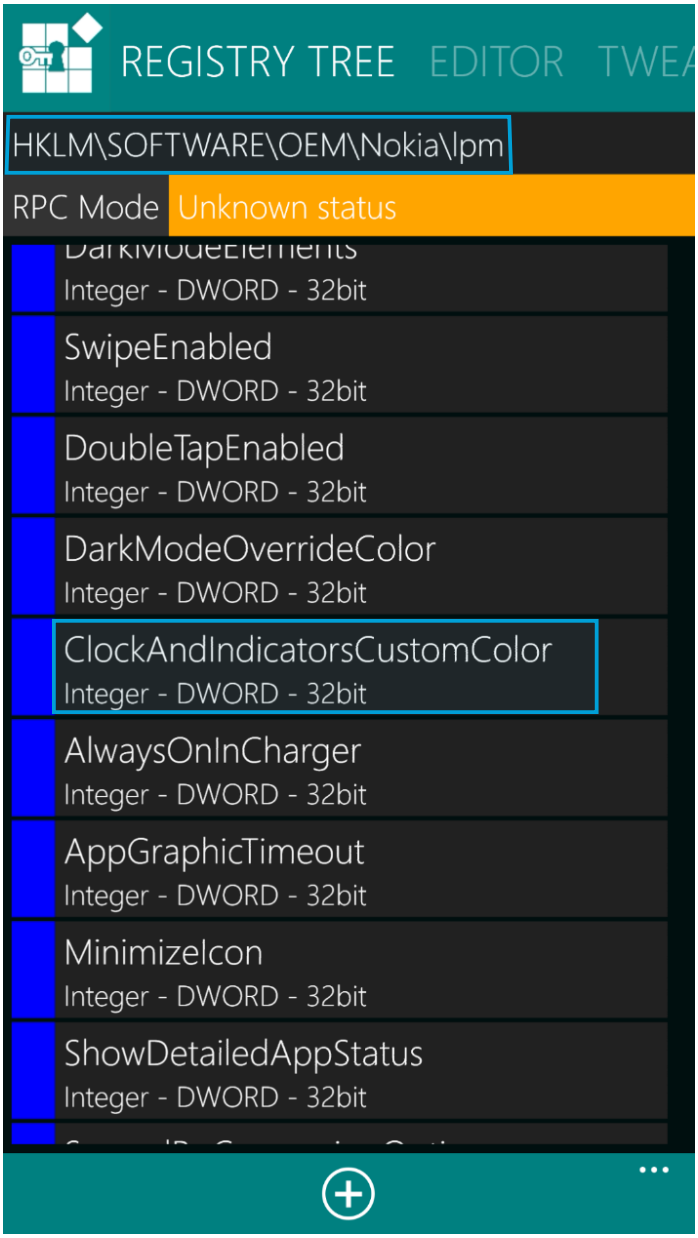
How to Change Normal Mode Glance Color

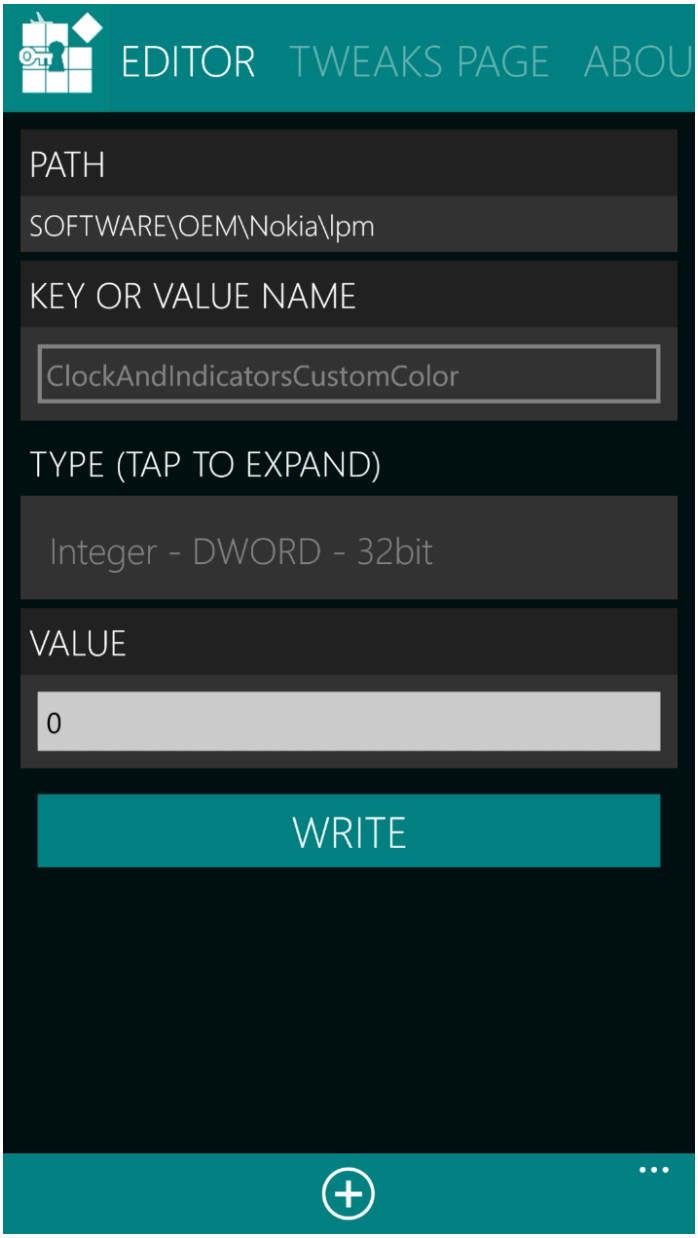
> Open CustomPFD app.

> Go to **"Registry Tree"**, then go to the below registry path;

HKLM → SOFTWARE → OEM → NOKIA → lpm

> Now find the **"ClockAndIndicatorsCustomColor"** key and open it.





> Click on the value box.

> As I mentioned before, you can input 6 different color values to have those colors as the Glance Color.

Enter the value of the color you want to have into the Value box.

Color	Value
Blue (Dark)	255
Cyan	65535
Green	65280
Magenta (Dark Purple)	16711935
Red	16711680
Yellow	16776960

Then write the changes using "**Write**" button.

> That's it, lock your phone and see the new Glance Color.

No restart is necessary, the changes take effect immediately.

If you ever want to reset back to the default White color, then refer to the REVERT Part of the guide.

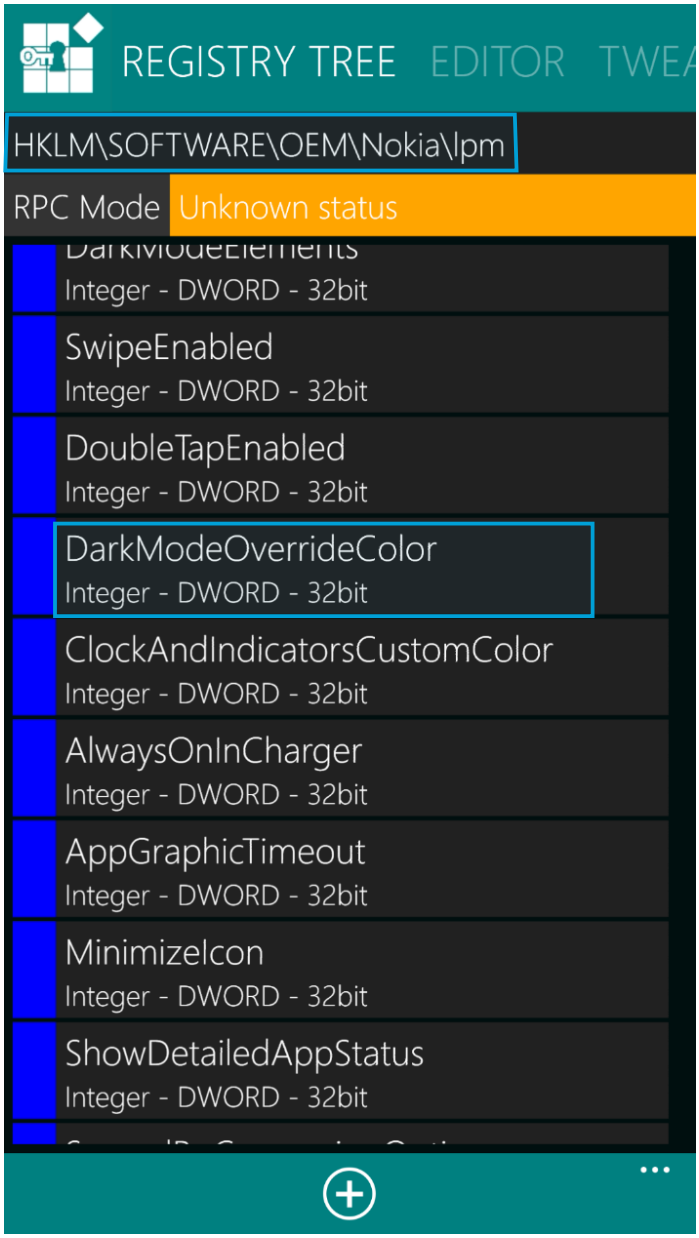
How to Change Night Mode Glance Color

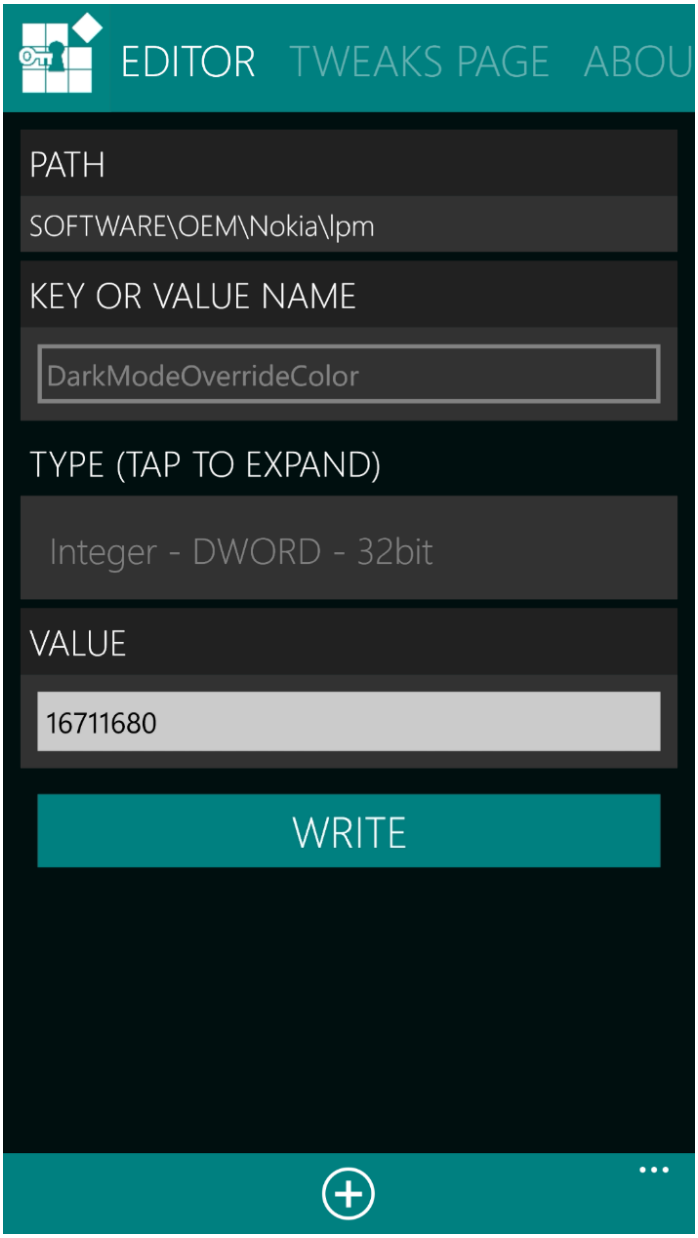
> Open CustomPFD app.

> Go to **"Registry Tree"**, then go to the below registry path;

HKLM → SOFTWARE → OEM → NOKIA → lpm

> Now find the **"DarkModeOverrideColor"** key and open it.





> Click on the value box.

> As I mentioned before, you can input 6 different color values to have those colors as the Glance Color.

Enter the value of the color you want to have into the Value box.

Color	Value
Blue (Dark)	255
Cyan	65535
Green	65280
Magenta (Dark Purple)	16711935
Red	16711680
Yellow	16776960

Then write the changes using "**Write**" button.

That's it, lock your phone and see the new Glance Color.

No restart is necessary, the changes take effect immediately.

NOTE

These changes will be visible only during the Night Mode active time as expected.

Check the time period you set for the Night Mode in Glance Settings of your Device.

If you want to restore the color back to default ones, check this REVERT part of the video.

#RESTORE: Revert Glance Color to default

If you ever feel you are better off with the default settings, then follow this part to get the changes reverted.

Revert Normal Mode Glance Color

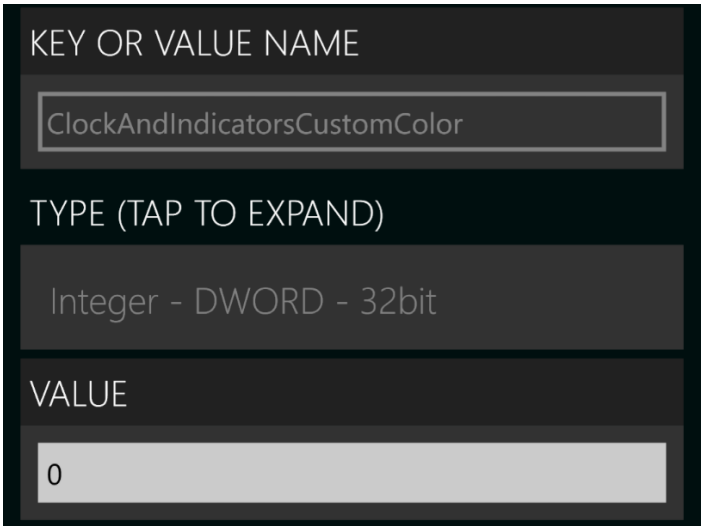
> Open CustomPDF & navigate to the below path in Registry browser like did before;

HKLM → SOFTWARE → OEM → NOKIA → lpm

> Find **"ClockAndIndicatorCustomColor"** key and open it.

> Change the value to "0" and write it.

> Then the normal Mode Glance color will be back to White.

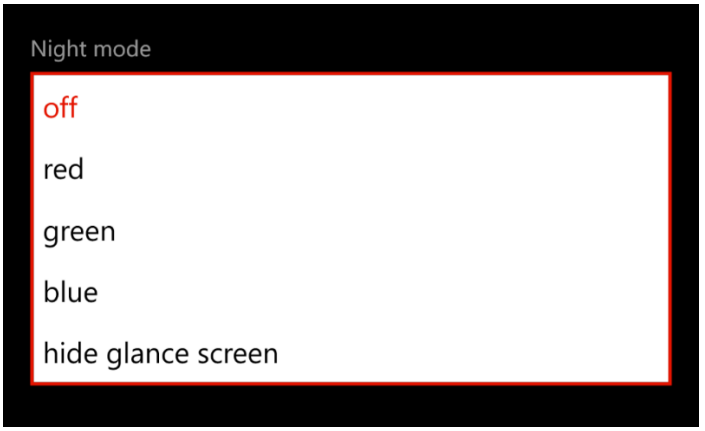


Revert the Night Mode Glance Color

> Go to "**Settings**" app in your phone and then go to "**Glance Screen**" settings.

> Then change the night mode color to any color apart from the already chosen one.

> Then the values in the registry will be reverted back to the default ones.



End Notes

- You can only use those 6 Colors, setting other colors in registry will simply result a blank screen.

  If that happened to you, change it back to any color value used in this guide.

  (Restart if needed)

That's all for this guide!

THANK YOU!!

Lasitha Samarasinghe
